

Rugged Computing for a Wireless World.

Flybook T4623i / T4633i

Versatile Mobile Computer Designed and Built for Field Use Superior Customer Service

The Flybook offers tremendous power and innovations in a compact size and integrated package. The Flybook places your powerful enterprise applications into the hands of the mobile worker.

- Highly integrated communication tool with integrated wide area wireless (EDGE/GPRS/GSM), WiFi, and Bluetooth
- Sub-compact notebook and convertible tablet for mobility
- High performance 1.1GHz processor with up to 512MB RAM
- Flexibility built-in with PCMCIA expansion slots allowing for additional wireless options
- Complete mobile notebook and convertible tablet system

Numerous Mobile Worker Environments

What type of activity do your mobile workers perform? The Flybook meets your connected application requirements in sales force automation, healthcare, warehousing, and hospitality environments. It is particularly well suited for the food and beverage industry as a sales tool for route distribution and direct store delivery.

Effortless Enterprise Integration

With the Flybook, global organizations can easily manage broad, system-wide enterprise deployments. Your operations and IT organizations expect the mobile devices to work like appliances – something you can just plug in and off it goes. They expect seamless and easy management of the devices for years to come.

Built for Field Use

The Flybook is designed for the ease of your mobile workers – small and lightweight with protective carrying case. The Flybook system includes a variety of accessories to fulfill your specific needs, such as high capacity battery, DVD-combo, memory options, carrying case and auto adapter.

Wireless WiFi and EDGE / GPRS

The Flybook offers multiple, simultaneous wireless connectivity to the enterprise through industry standard WiFi, wide area wireless communications via tri-band GPRS networks (EDGE, GPRS, GSM), and connection to printers and other devices via Bluetooth short range wireless.

Specification Highlights - Latest Generation Mobile Technology

The 1.1GHz processor with up to 512MB of RAM provides the horsepower needed for today's and tomorrow's applications. The Windows XP Professional Edition offers the latest security and scalable networking features, faster performance, rich multimedia and web capabilities, and greater interoperability with PCs, servers and web services.
